

## **F. POST-EARTHQUAKE DATA COLLECTION FORMS**

Two post-earthquake data collection forms were developed for two nonstructural components: (1) suspended acoustical tile ceilings and (2) metal stud partitions. Collection of these data is essential to advancing the protection of nonstructural components. These forms are intended to serve as a starting point for data collection subject to revision and refinement as they are used in the field. Other similar forms can be developed for other systems and components when resources become available.

The forms are provided as Microsoft word files on the CD-ROM and should be customized for use in projects.
